

Cube Dynasim Product Family

Acquiring the right product for your needs

The Cube Dynasim family of products offers state-of-the-art microsimulation software that enables you to study and visualize traffic in amazing detail. You can choose the product that best satisfies your analytical needs and budget requirements.

You can choose from three Cube Dynasim products:

- **Cube Dynasim Pro** — Cube Dynasim Pro allows you to study all modes of traffic bound for any number of destinations. Cube Dynasim Pro includes a newly released module that allows you to override the model's signal controls with an external program, which communicates through your computer's TCP/IP socket interface. With this module, you can link to and use actual signal controllers for a Cube Dynasim simulation. Cube Dynasim Pro includes 40 free exports to Cube Dynasim Views.
- **Cube Dynasim Roads & Pedestrians** — Cube Dynasim Roads & Pedestrians offers the same functionality as Cube Dynasim Pro, but does not include the modules for studying public transit or for overriding signal controls through the TCP/IP socket interface. Cube Dynasim Roads & Pedestrians includes 20 free exports to Cube Dynasim Views.

- **Cube Dynasim Compact** — Designed for those who need to analyze one or two intersections, Cube Dynasim Compact allows you to study traffic bound for six destinations. Typically, models have a destination for each road leading from an intersection. For example, an intersection at a four-way stop has four destinations. Cube Dynasim Compact does not include the modules for studying public transit or for overriding signal controls with the TCP/IP socket interface. Cube Dynasim Compact includes 10 free exports to Cube Dynasim Views.

Cube Dynasim product comparison

	Pro	Roads & Pedestrians	Compact
Size	Unlimited	Unlimited	6 destinations
Exports	40	20	10
Automobile	✓	✓	✓
Truck	✓	✓	✓
Pedestrian	✓	✓	✓
Public transit	✓		
TCP/IP interface	✓
